

Code-Layout, Readability and Reusability

Date	29 September 2026
Team ID	6ab2a721eb88f5d3d45a509b
Project Name	Student Enrollment & Course Management System (SECMS)
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

The Student Enrollment & Course Management System (SECMS) is developed using Salesforce-native technologies such as Salesforce Objects, Lightning App, Flows, Validation Rules, Approval Processes, Reports, and Dashboards. The project follows a structured and modular configuration approach to make the system easy to understand, maintain, and extend.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing and formatting are used throughout the code/configuration.	Yes	Salesforce formulas and automation elements are organized consistently.
2	Proper File Structure	Files, folders, and project components are logically organized.	Yes	Student, Course, Instructor, and Enrollment components are separately organized.
3	Meaningful Variable Names	Variables and field names clearly represent their purpose.	Yes	Names such as Enrollment_Status__c, Fees_Paid__c, and Enrollment_Date__c clearly describe their purpose.
4	Function / Method Names	Functions or automation components are given descriptive names.	Yes	Names such as SetEnrollmentDate, AutoAssign_Instructor, and Create_Followup_Task describe their functions.
5	Code Comments	Comments explain the purpose and functionality of code or configuration.	Yes	Purpose and implementation of validation rules, flows, and approval processes are documented.
6	Modular Design	The project is divided into separate reusable functions or modules.	Yes	Student, Course, Enrollment, Instructor, Automation, Reports, and Dashboard modules are separated.
7	No Redundant Code	Duplicate or unnecessary code is avoided in the project.	Yes	Reusable Salesforce Flows and configuration components reduce duplicate logic.

8	Error Handling	Errors and invalid inputs are handled properly to prevent incorrect processing.	Yes	Validation Rules prevent invalid student data and approval of unpaid enrollments
---	----------------	---	-----	--

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	where Reused	Reusability Level (High / Medium / Low)
1	Student Management	Salesforce Custom Object	Student registration and student record management	High
2	Course Management	Salesforce Custom Object	Course creation, course details, and enrollment tracking	High
3	Enrollment Management	Salesforce Custom Object	New enrollment and re-enrollment processes	High
4	Instructor Assignment	Salesforce Flow	Automatic instructor assignment based on course category	High
5	Enrollment Validation	Salesforce Validation Rules	Student email and fee validation	High

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5	The project components are organized into separate Salesforce objects, automation, security, reports, and dashboard modules.
Readability	5	Descriptive object, field, flow, validation rule, and report names make the system easy to understand.
Reusability	5	Salesforce Flows, Validation Rules, Reports, Dashboards, and custom objects can be reused and extended for future academic requirements.
Documentation / Comments	5	Each major component contains a defined purpose and implementation description.
Overall Score	5/5	The project follows a structured, readable, modular, and reusable design approach.

Conclusion

The SECMS project follows good practices for structure, readability, and reusability. The use of Salesforce custom objects, validation rules, flows, approval processes, reports, and dashboards provides a modular approach that can be maintained and extended for future requirements. The system is designed to centralize student, course, instructor, and enrollment information while reducing manual work through automation.
