Project Name	Student Enrollment & Course Management System (SECMS)
Maximum Marks	5 Marks

Coding & Solution

The Student Enrollment & Course Management System (SECMS) is implemented using Salesforce-native technologies. The solution addresses the core requirements of student management, course management, enrollment processing, instructor assignment, approvals, automation, reporting, and dashboards. The system uses Salesforce Objects for data storage, Salesforce Flows for automation, Validation Rules for data validation, Approval Processes for enrollment approval, and Reports and Dashboards for monitoring and analysis.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/anitha12062007-spec/Student-Enrollment-Salesforce-Project
Programming Language(s)	Salesforce Configuration, SOQL / Salesforce Formula where applicable
Framework(s) Used	Salesforce Lightning Platform
Key Features Implemented	Student Management, Course Management, Instructor Management, Enrollment Management, Validation Rules, Approval Process, Automated Instructor Assignment, Enrollment Notifications, Follow-up Task Creation, Reports, Dashboards, Security
Pending / Incomplete Features	Payment Gateway Integration, Student Self-Service Portal, Mobile Access, Analytics-driven Insights
Setup / Run Instructions	Create/Login to Salesforce Developer Org → Create custom objects and fields → Configure relationships → Create validation rules → Configure approval process → Create flows → Create reports and dashboards → Configure security → Test the application.

The implemented features are based on the SECMS project requirements, including student,

course, enrollment and instructor management, automated processing, approvals, reports, and

dashboards.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The SECMS solution follows a modular Salesforce architecture. Separate custom objects are used for Student, Course, Instructor, and Enrollment data. Validation Rules are used to prevent invalid data, while Salesforce Flows automate enrollment dates, notifications, instructor assignment, and follow-up tasks. An Approval Process is used to verify enrollment requests before confirmation. Reports and Dashboards provide centralized monitoring of student status, course enrollments, pending approvals, and revenue.

The system has been designed to reduce manual enrollment work, improve data accuracy, and provide a structured solution for academic enrollment management.
