

Solution Requirements

Date	29 September 2026
Team ID	6ab2a721eb88f5d3d45a509b
Project Name	Student Enrollment & Course Management System
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

The Student Enrollment & Course Management System (SECMS) defines the functional and non-functional requirements needed to manage student enrollment activities efficiently. The requirements describe what the system should do and how well the system should perform.

Functional Requirements (FR) define the specific features and operations of the system, such as managing student records, courses, enrollments, instructor assignments, approvals, and reports.

Non-Functional Requirements (NFR) define the quality and performance standards of the system, such as usability, security, reliability, performance, scalability, and availability.

These requirements ensure that the SECMS provides a secure, reliable, user-friendly, and efficient solution for managing academic enrollment operations

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users shall securely log in to the Salesforce system using their authorized credentials.	High
2	Authorization levels	Admin, Enrollment Officer, and Instructor shall have role-based access to the required student, course, and enrollment records.	High

3	External interfaces	The system shall use Salesforce Lightning, Salesforce Objects, Flows, Reports, and Dashboards within the Salesforce environment	Medium
4	Transactions processing	The system shall process student enrollment requests, fee status, approvals, rejections, and instructor assignment	High
5	Reporting	The system shall generate reports and dashboards for student status, enrollments by course, pending approvals, and fees paid.	High
6	Business rules, etc.	The system shall validate student data, prevent duplicate or incorrect enrollments, require fees to be paid before approval, and automatically assign instructors.	High
7	Compliance to laws or regulations	The system shall protect student personal and academic information using secure access controls and role-based permissions	High
8	<i>Other</i>	The system shall provide automated notifications, follow-up tasks, enrollment date updates, and student status updates	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The system shall provide fast access to student, course, and enrollment records and dashboards	Quick dashboard refresh and fast record search
2	Scalability	The system shall support increasing numbers of students, courses, departments, and users.	New departments and increased admissions can be supported without redesign
3	Security & Data Privacy	The system shall protect student and institutional data through authentication, authorization, and access controls.	Only authorized users can access relevant records
4	Reliability & Availability	The system shall protect student and institutional data through authentication, authorization, and access controls.	No duplicate registrations and accurate status updates
5	Usability & Accessibility	The system shall provide a simple, intuitive interface with clearly labeled tabs, forms, and dashboards.	Users can perform operations with minimal training
6	<i>Other</i>	The system shall allow future modules and features to be added easily.	Easy extension for mobile access, portal integration, and new features
